

Polypipe Building Products

Energy Management Policy

The management team at Polypipe Building Products recognise that the company's activities must be adequately managed to minimise energy use in the production, assembly and distribution of its products, which consistently meet the needs of our customers.

This team will promote and support the necessary systems, procedures and energy management initiatives to ensure energy use is clearly identified, managed and reduced in line with both local, UK and international requirements whilst still meeting operational needs.

Through the application of documented management systems, certified to ISO 50001:2018 the company will:

- Ensure that the Energy Management system operates in combination with our existing accredited management systems – Quality Management (ISO 9001-2015), Environmental Management (ISO 14000:2015) and Health and Safety Management (ISO45001:2018) systems.
- Meet the demands of identifying energy usage through to reduction initiatives in line with business requirements.
- Ensure all legal and other requirements are met in relation to reducing energy.
- Drive towards completion of objectives and targets through, energy led, CI activity across the Polypipe Building Products' sites.
- Plan effectively with the aim of reducing energy intensity and usage by 1% year on year.
- Effectively contribute to the reduction of CO2 emissions through reductions in energy use and misuse.
- Ensure adequate information, training and resources are available to achieve the objectives and targets for the Polypipe Building Products' sites.
- Provide resources to effectively capture and review data to ensure prioritisation of objectives and initiatives to reduce energy where possible.
- Give serious consideration to energy efficiency within the design and procurement for new projects, refurbishment works and plant/equipment upgrades.
- Communicate the importance of energy use through reports, team briefs and HSE meetings to enable contribution from all employees at Polypipe Building Products.
- Ensure the Energy Policy, commitments and targets are reviewed on an annual basis.

Polypipe Building Products is committed to a structured approach to the management of its activities, to ensure compliance with the requirements of ISO 50001. The company will strive to continually improve the effectiveness of the Energy Management system, via regular system audits, reviews and business wide communications.
