## 4 Zone RF Time Clock

User Guide UFHTIME4RFB

# (e) Polypipe 

Underfloon Heating

## Overview

The RF 4 Zone Time Clock is designed to work with the Dial Thermostat (UFHDIALRFB) to provide time control per manifold. Time clock also has 3 other zones which can be used.

The unit is designed to be used with our range of wireless master wiring centres and slave units.

Details on how to initiate communication with the receiver units in RF applications are provided in the additional RF documentation.

This user guide provides user settings and Programming details, these and the advanced settings can also be downloaded from www.polypipeufh.com in A4 format.

## Please Read Before Programming Your Time Clock

## Time settings

The Time Clock operates in 2 different modes:
Comfort - The time clock is on allowing individual room thermostats to operate.

$\square$
Setback - The time clock will be off, meaning no room thermostats will operate.

This is to assist the response time of the heating system.

## 1 Battery Access and User Controls

2

### 1.1 Keyboard

### 1.2 Display

1-3 Setting or measured hour/text/indications
4 Operating mode menu (active mode is framed)
5 Program number or parameter number if " 7 " is displayed
6 Temporary override function activated
7 Installation parameter menu
8 RF transmission logo
9 Low batteries indicator
10 Modification of parameter
11 Program of the current day
12 Zone number or Period number in the program of the current day or current zone number

13 Key lock indicator
14 Current zone state: "On" (activated) and "Off" (disabled)
15 Frost protection is activated
16 Days of the week (current day is framed)
17 AM/PM

> NOTE: At any time, when the backlight is switched off, press the (OK) key to activate the backlight and wake up the product. Press another time the (OK) key to show the current setting temperature.

## 2 First Time Installation

This section will guide you to starting your time clock for the first time.

### 2.1 Installing Batteries

- Lift the front panel off and insert the $2 \times$ AAA alkaline batteries supplied (or remove the small protection sticker if the batteries are already installed in the compartment)
- Replace the front panel
- Your time clock will ask you to set the time
- Note: The time and date setting can be set at any time by pressing the (OK) key for 3 seconds

### 2.2 Time and Date Adjustment

The valve to be adjusted will blink, and is adjusted with keys (-) and (+). Once the adjustment is made, accept it with the (OK) key.

The time clock will jump automatically to the next value.

## Progress of the adjustments:

Time and day:
Hours setting
Minutes setting
Day of week setting

## Date:

Day setting
Month setting
Year setting
You can access the time and date adjustment made by pressing (OK) key for 3 seconds at any time in off mode.

### 2.3 Zone Allocation and RF Initiation

Once the time and date have been entered, the unit will ask you to activate the required number of heating zones by displaying:

By displaying a flasing "Yes", this means that Zone 1 is active. By displaying a flashing "No", this means that Zone 1 isn't active. Select "Yes" or "No" with (-) and (+) keys.

Once "Yes" is entered for a zone, press (OK) key. The unit will indicate that RF initiation is taking place for that particular channel by displaying a series of dashes:

Once the receiver unit or RF master unit has been accepted the initiation signal, repeat the
process for the remaining required channels.
By pressing the $<$ or $>$ keys, select the zone number and if you want to finish zone initiation step, press (OK) key when this screen is

## int

displaying:
You will be able to change your configuration by accessing the zone activation menu (page 37).

Important: If no zone is activated, all working modes won't work.

## 3 Selecting a Preset Program P1 to P9

There are 9 preset programs P1-P9.
The time clock will default to $\mathbf{P 1}$ (see programs pages 26 to 34).

To select a preset program use the navigation keys to move the cursor from Auto to Prog.

## Mo Tu We Th Fr Sa Su

Press OK to make the P1/P9 adjustable.
Use the (-) or (+) keys to choose P1 to P9, or U1 to U4 (User Defined Programs).

Select and validate with (OK) to return to Auto.

## 4 User Defined Programs U1 to U4

You set "on" and "off" times for each period, up to 3 periods per day eg. Morning, afternoon and evening. Between time periods, temperature will default to "Setback". $\quad$ ©

If for example at a weekend you only need your heating to come "on" and "off" once, you only need to set period 1 and skip the others.

### 4.1 Creating User Defined Programs

Use the navigation keys to move from
Auto to Prog as previous. Press (OK) to make P1/P9 adjustable.

Use the (-) or (+) keys to choose P1 to P9, or $\mathbf{U 1}$ to $\mathbf{U 4}$.

Select any of U1 to U4 as this allows each time clock to store up to 4 user defined programs in its memory.

With U1 to U4 blinking press the (OK) key to access the program settings.

- The program creation will always start with the Monday.

Once you have pressed the (OK) key, the following display will appear:

Adjust the hour of the first step of the program with (-) or (+).

Press (OK) to validate and jump to the following step.

You can set this period to run to the end of the day (midnight) by pressing (OK) or, use the (+) button to set the "off" time for this period.

If all periods for this day are finished press (OK) to accept or press (+) button to set the start time for the next period.

Repeat previous steps until all periods are set and press (OK) to complete.

You then have the option to copy this period to other days, or create new programmes for each day.

## Mo Tu We Th Fr Sa Su [0fy

You can scroll between "Yes" and "No" using the (+) and (-) keys. Pressing the (OK) button will accept you selection. You can copy to each day individually or scroll to "No" and create new programmes as previously.

To edit and existing user defined programme, select the existing programme in the Prog menu (U1 - U4) and press (OK) button. You will then be given the option "Edit Prog" "Yes" or "No"

## Prog

## Mo Tu We Th Fr Sa Su

Selecting "No" will take you back to AUTO mode, selecting "Yes" will give you the option to erase "Yes" or "No". Selecting "Yes" will clear the previous programme and allow you to start from the begining. Selecting "No" will allow you to edit the existing programme, scroll through days with the (-) or (+) key, then press (OK) on the day you wish to edit. Once complete, press (OK) to accept the programme and return to AUTO mode.

## 5 Operating Menus

### 5.1 Automatic Mode (Auto)

In this mode the time clock will follow the chosen program (Built-in or User defined) according to the time.

### 5.2 Off Mode (Off)

Use this mode if you wish to turn off your time clock.

Frost protection is automatically provided as a minimum temperature of $5.0^{\circ} \mathrm{C}$ will be maintained.
(This temperature can be changed, contact your installer or check advanced menu).

### 5.3 Holiday Mode (Hol)

The Holiday mode allows you to adjust the time clock for a period of days:
The display will show "no" press (OK)

- adjust the duration in hours with (-) or (+) press (OK) to validate.
- adjust the duration in days with (-) or (+) press
(OK) to validate (adjustable 1 to 99 days).
The (On) icon will blink and the number of days remaining is displayed until the end of the period.
If you want to stop the holiday function before the end of the duration you can do so by the following steps:
- adjust the duration to 0 days
- pressing the $<$ or $>$ keys will bring up the cancel screen, select Yes with the (-) or (+) keys and press (OK) to validate.

### 5.4 Keyboard Lock Function 0—

Use this function to prevent changes to the settings:

- To activate the key lock function, press the two arrow keys simultaneously.
- The $\mathbf{0} \boldsymbol{-}$ logo will now be displayed on the screen.
- Repeat with the same procedure to unlock the keyboard.

## 7 Hidden Menu:

There is a hidden menu which can be accessed by pressing and holding a combination of buttons.

The user menu can be used to set a number of user preference such as a 12 hour or 24 hour clock display, temperature readings in either degC or degF, etc and the installer menu can be used to adjust various operational settings of the unit.

The access the User menu set the unit to the (Off) setting and press and hold the (OK) button for 5 seconds.

To access the Installer menu set the unit to the (Off) mode and press and hold the (OK) button for 5 seconds.

## UFHTIME4RFB User Menu
